

Marking with replaceable needles!

Hard-metal tip safe and permanent!

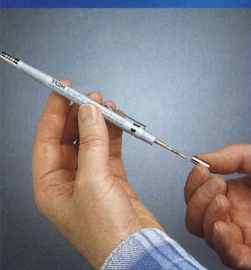

The TICOM marking needles in the practical pen shape with a pocket clip. Even working materials up to about 60° HRC can be marked without problems by this needle of highly wear-resistant hard metal. The brass jacket holds it absolutely tight in the robust collet and simultaneously protects it against loss.

TICOM® ErgoForm

The metal shaft proves its worth, even in hard continuous use. The non-slip surface with its grooves also gives oily and greasy hands a sure hold. So that markings become clearly better.

TICOM® Spezial

Simpler version with identical pressure mechanics, but hexagonal shaft of quality plastic.

Simply safe.

Press the button and loosen the mechanics. The needle slides into the protecting shaft, so that nothing can happen to either it or you.

Replacement.

Pull the button off and the old needle slides out. Put in the new needle, replace the button, finished.

New needle.

Replacement needles in packs of 5. Tip of hard metal in an easy-to-hold brass jacket.

Convincing.

An ounce of practice is better than a pound of theory, especially in the trade. The ErgoForm test display is available free of charge.

Sharp contour.

Precise marking: on metals and other working materials with smooth surfaces, even up to a hardness of 60° HRC.

Quick grind.

Worn-down replaceable needles can be re-ground with a silicon carbide grinding wheel up to a useful length of 10 mm.

Best results.

To regrind the needle, extend it as far as possible. When marking, only the hard-metal tip may protrude from the collet.

Order data:

Article number: 225.1
Article designation: TICOM ErgoForm with metal shaft and hard-metal needle
Packaging: in transparent cover
Length: 150 mm
Ø Shaft/needle: 9 mm
Weight: 25 g
Packaging unit: 10 pieces

220.1
TICOM Spezial with plastic shaft, green and hard-metal needle in plastic case
150 mm
7 mm
15 g
20 pieces

230.1
Hard-metal replacement needle in brass jacket in polyethylene bag
32 mm
2 mm
1 g
20 pieces (4 packs of 5)
